

# iManage COM Add-in Migration

Are legacy COM add-ins or integrations for iManage Work preventing you from migrating to the iManage Cloud ?

Review

Re-develop

Host & Deploy

## Review

- We will schedule a scoping call with you to review the functions your add-in
- Undertake a review of any source code for the application
- We will provide, free of charge, a statement of work to re-develop the add-in to iManage Universal App standards

## Re-develop

- Once the statement of work is agreed, we will re-develop your application using the iManage Rest API's and Microsoft .NET
- We can assist with Universal App certification of your add-in with iManage
- We will test the re-developed application against CloudiManage.com, as well as the latest on-prem versions, if required

## Host & Deploy

- We will provide deployment packages and technical documentation for your upgraded application
- Additionally, we can host and support your application in a Microsoft Azure region of your choice
